Technical Skills

Languages	C, C++, C#, Python
Game Development	Unity, Godot, Pygame
Backend & Systems	C++, Python, MySQL
Web Development	HTML, CSS, JavaScript
Tools	Git, GitHub, GitLab, Blender, Linux

Experience

Dipner Tech Solutions Pvt Ltd

3D MODELER INTERN

May 2025 - July 2025

- Designed and textured high-quality 3D models for IoT devices and hardware components.
- Created realistic product renders and visualization assets for technical presentations.
- Developed prototype models for IoT-based devices prior to physical manufacturing.
- Optimized mesh topology and materials for performance and visual clarity.
- Collaborated with engineering and development teams to align 3D models with functional design requirements.
- Assisted in converting conceptual device designs into manufacturable 3D representations.

Education

University of Petroleum and Energy Studies (UPES), Dehradun

2023 - 2027

B.TECH. IN COMPUTER SCIENCE AND ENGINEERING

Projects

DeathValley – 3D Unity Game

TECH STACK: UNITY, C#, BLENDER

- Designed and implemented core game mechanics using C# scripting.
- Translated gameplay concepts into functional in-engine systems.
- Built player interaction logic, event systems, and gameplay state management.
- Collaborated with designers and artists to integrate 3D assets and animations.
- Contributed to overall game logic architecture.

Jaded – 2D Monster Catching Game (Engine-less Development)

TECH STACK: PYTHON, PYGAME

- Developing a complete 2D monster-catching RPG without using a game engine.
- Designed custom game loop, collision detection, and rendering pipeline.
- Built battle mechanics, state management, and level systems from scratch.
- Engineered reusable modular systems to replicate common engine features.
- Responsible for game design, scripting, architecture, and level design.

Personal Resume Website

TECH STACK: HTML, CSS, JAVASCRIPT

- Designed and developed a fully responsive personal portfolio website.
- Implemented front-end UI/UX and client-side scripting.
- Integrated EmailJS for contact form functionality.
- Deployed and maintained the project independently.

Vortex – Unified Game Launcher with ML-Based Recommendations (Ongoing)

TECH STACK: C++, PYTHON, MACHINE LEARNING

- Working as Backend Developer in a team-based environment.
- Developing core backend systems in C++.
- Assisting in ML-based recommendation feature using Python.
- Designing scalable architecture for game library management.
